

Impact Brief — Voltus

Lifecycle communications + automation that improved adoption and reduced response time

The goal

Increase adoption by improving onboarding clarity and lifecycle messaging, while reducing response time through more consistent internal workflows.

What I did

- Reworked onboarding messaging into an action-first sequence (“what to do next” + expected outcomes)
- Built lifecycle touchpoints to reduce friction and proactively answer common questions
- Designed and implemented workflow automations for handoffs, reminders, and follow-up consistency
- Added lightweight reporting to track adoption and response-time trends and guide iteration

Results

- **+25%** adoption lift through clearer onboarding and lifecycle communications
- **-30%** response time with workflow improvements and automation
- **6+** automations shipped to reduce manual effort and improve consistency

Why it worked

Clarity removed hesitation. Automation removed variance. Together, they improved trust through consistency and made results measurable.

Tools

CRM (HubSpot/Salesforce) • Docs/Notion • Analytics • Canva • Automations (CRM workflows / Zapier)

Redacted onboarding sequence, workflow/automation map, and a reporting snapshot available on request.
